Advanced Mould Technology

AMT® ADVANCED MOULD TECHNOLOGY

ATM - Advanced Tube Mould

Challenge

- Eliminate corner gaps
- · Improve uniformity of mould cooling and dimensional stability

Solution

- · Replace traditional four-piece bloom mould plate with one-piece mould tube design
- Thin-walled copper tube design and uniform water gap cooling design
- Low stress AFM® mounting technology (cunova patent)

Application

· All bloom moulds

Advantages

- · Optimized cooling conditions due to water gap-type cooling and special designed back-up plates avoiding an overcooling of the corner area
- · Homogeneous temperature profile of bloom
- Increased average heat transfer rate
- Improved strand quality
- · Repair by inside copper coating and mechanical machining with keeping constant Cu wall thickness above cooling water
- Repair 4 5 times possible
- Longer lifetime due to reduced thermal stress with average lifetime of 25,000 - 40,000 t between repairs
- · Reduced operation costs due to lower maintenance costs

AMT® ADVANCED MOULD TECHNOLOGY

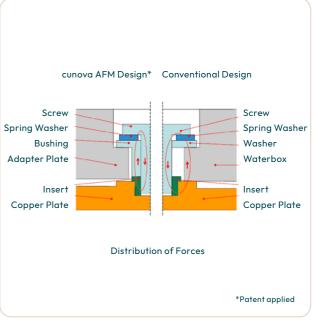

ATM - Advanced Tube Mould

Easy and low-cost revamp from mould plate construction to mould tube construction, because the existing steel frame and waterboxes of the mould plate construction will still be used.

Back-up plates one time investment; can be endlessly used due to special copper alloy.

Low stress AFM® mounting technology (cunova patent) of copper tube and back-up plate allowing the thermal expansion of the copper mould tube
